YOUR SECURE CLICKER FOR PRESENTATIONS

Product Description

In an era when **cyber-attacks** are becoming more common and much more sophisticated, it's become increasingly difficult for security and military organizations to **remain cyber secure while maintaining their regular operations.**

Presentations and briefings are an inseparable part of the daily schedule in any security organization.

Most **remote controllers** for presentations today are based on Bluetooth or Wi-Fi technology. While being extremely useful technologies, Wi- Fi and Bluetooth are un- secure in terms of protection against information leaks, and generally make it easier for malicious organizations to hack secure networks.

Up until today, **there hasn't been a solid solution** for that allows the use of remote controllers in security organizations.

Why Is This For Us ?

The remote controller that we have developed is based on **a unique CC (closed circuit) technology**, currently in the process of **patent registration**. With our technology, we've found the best way to connect to a PC **without allowing any information leak.**

Comfortable to use and tough design.
Our unique remote controller has attracted the **attention** of security organizations **around the globe.**
